

PRESS-RELEASE, November 2009

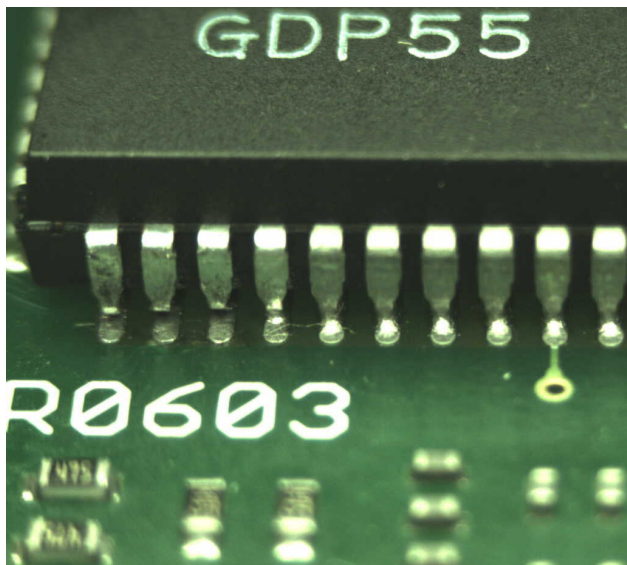

## First angled-view option for AOI-tabletop system

During productronica 2009 Prüftechnik Schneider & Koch will present a brand new angled-view module for it's AOI systems LaserVision.

Mounted PCBs are getting more and more complex while components and solder joints are getting smaller and smaller. Especially pins that are placed laterally under a PCB are difficult to keep in view with orthogonal inspection. The new angled-view module from Schneider & Koch has four lateral cameras in addition to the main camera. Due to the added image information it is possible to inspect solder joints that have not been testable before.

The angled-view module is optional for all LaserVision systems. Hence, with it's **compact AOI-tabletop system** Schneider & Koch is one of the first on the market to provide an economical entrance into the topic of AOI including angled-view inspection. To protect former investments, it is also possible to upgrade systems already in use.

Visit us on our booth 459 in hall A1 during productronica 2009.
